Abstract			
A long-acting intra-ocular release system of cyclosporin is composed of cyclosporin and carrier in Wt. ratio of (0.1:0.9-0.9:0.1). The said carrier is the synthetic and natural bio-degradable high-molecular materials, or their mixture. Its advantages are long release period (one week to one year), and high curative effect on preventing and treating repellent reaction after corneal transplantation, chronic uveitis, etc.
